OBJECTIVE

To obtain a leadership position in the field of software engineering that will help me to broaden my technical skills and understanding software development.

EDUCATION

Southern Illinois University at Edwardsville, Edwardsville, IL

- Bachelor of Liberal Studies with an emphasis in Art, Minor in Business Administration
- Masters in Business Administration with a Specialization in Management Information Systems

Washington University of St. Louis, St. Louis, MO

- Masters in Computer Engineering

TECHNICAL SKILLS

- C++ Programming
- HTML, CSS, JavaScript
- Java
- JUnit
- Kotlin
- Typescript
- Python
- ReactJS
- SimConnect
- Spring Framework
- SQL
- Test-Driven Development
- Visual Studio Code / Enterprise

EXPERIENCE

*July 2015 -
Present*

The Boeing Company – Senior Developer | June 2019 – Present | St. Louis MO

- Developed several mod packages using C++ web assembly capable of accessing internal APIs and allowing for interaction.
- Developed flight component logic using C++ for virtual versions of the 737Max8 737Max9 and 737NG planes.
- Implemented a CI/CD pipeline yaml in Azure DevOps
- Updated and implemented logic for plane flight controls using Reverse Polish Notation based XML code.
- Designed and implemented logic for the Primary Flight Display, Multifunction Flight Display and Flight Management Computer using Typescript, HTML, and CSS.
- Act as a Dev Lead for the 737Max8 MOD team where I am responsible for reviewing and testing all code before it is migrated to production.

- Developed custom components with Boeings Common Simulation Framework and integrated Boeings SimBinary packages with the corresponding planes in ESP, Microsoft Flight Simulator X, and Microsoft Flight Simulator 2020.
- Implemented a Simulation State Control Service that uses SimConnect to interact with Microsoft Flight Simulator 2020 using C++.
- Work with Third Party Simulation Code and gain experience in Game development and integration.
- Assisted in Onboarding multiple resources by resolving any issues with software installation, plugin setup, plugin execution and a general explanation of the application architecture.
- Developed a large-scale request and workflow tracking system for the treasury organization at Boeing using ReactJS and Kotlin.
- Implemented a CI/CD pipeline in Gitlab
- Practiced Test Driven development on a Treasury application using Enzyme and JUnit.
- Developed an interactive dashboard that allowed all Boeing employees to have a better user experience on the internal Boeing Homepage using Javascript, Thymeleaf and Java.
- Used Spring Boot Framework and pushed application into Cloud based storage.
- Worked in a single and paired programming environment and used Agile development standards.
- Implemented a CI/CD Pipeline to run automated tests and move our application between environments with little to no manual involvement.

The Boeing Company – System and Data Analyst | July 2015 - June 2019 | St. Louis MO

- Worked as scrum master for multiple product teams on multiple applications
- Became a specialist at using Team Foundation Server and coached other teams to use agile methodologies through the work tracking application.
- Acted as production focal and worked with customers and developers to fix any issues that occurred with the application in a timely manner
- Acted as change management focal for a large application and worked to reconcile changes to the application so that I could accurately report them for SOX audits.
- Transitioned from an analyst to developer role in the creation of an application which interfaces with several other apps and improves user experience using an interactive desktop.

*June 2013 –
July 2015*

Accenture Federal Services – Senior Systems Specialist, St. Louis, MO

- Proxy Product Owner on Scrum Team working on a multimillion-dollar billing application
- Used a variety of development software for SQL/PLSQL and XML.
- Managed changes to VersionOne to track Scrum team members progress and burn down.
- Updated requirements, defects, and test scripts in ALM.
- Clarified and refined requirements to assist in testing efforts of defects and application enhancements.
- Validated system functionality against specifications and managed testing effort.
- Challenged new members of the Scrum team with complex tasks and helped them work through issues.
- Assembled and gave several presentations on new functionality to members of the System Integration Testing team.
- Communicated issues and devoted time daily to the Client Application Test team and their efforts.
- Participated in several conference calls a day to discuss issues and timelines with other teams and business representatives.
- Maintained working relationship with developers and management.
- Played a key role in the Agile and Waterfall methods of the Software Development Lifecycle.
- Using the Agile Sprint method, all defects and application enhancements were completed at or under a two week timeframe.
- Created and maintained relationships with Product Owners and business representatives of the United States Postal Service in Washington D.C. to clarify issues with requirements.

*August 2008 –
June 2013*

ConocoPhillips Hartford Lubricants – Production Associate/ Hartford, IL

- Production Associate capable of running and maintaining several production systems
- One of six Safety Core Team Leaders responsible for internal audits, safety initiatives, and plant wide presentations
- Became fluent in SAP computer system while organizing inbound outbound freight
- Accomplished annual Online Based Training concerning all aspects of safety protocol
- Pulling and loading orders for outbound trucks
- Co-managed the Behavior Based Safety Team which contributed to Hartford Lubes Recertification
- Created and gave several presentations on safety issues throughout the plant
